Locating Functions

Reason for Existence

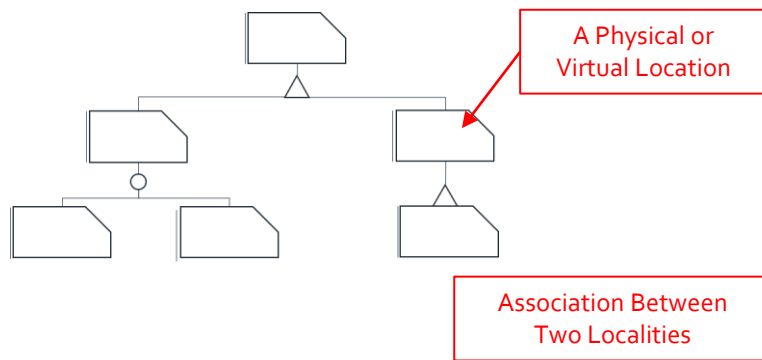

Business is definitely influenced by the geographical impact from its three environments. A method of locating business objects, functions, equipment and organisation structures is to locate the business functions.

Locality decomposition indicates containment. The reason for decomposition has to be listed in every structure.

An example would be where a town like Ventersdorp could appear in the containment structure for a concept like the Maize Triangle. It could also be contained in a structure that indicates a high summer rainfall. This will support the decision for opening a branch in this town if one sells Power Generators. The reason for this is that the local supply of electricity is very unstable in rainy or thunderstorm conditions and the farmers would be dependent on electricity to drive their hammer-mills.
