Accommodate Business Priorities into Architectural Priorities

In accommodating the Business Priorities into Architectural Priorities we compromise the two approaches by combining them and capitalising on the benefits that they both provide. This is done by developing only the required file structures or manual structures of the architecturally required sub-systems, to ensure the integrity of the peripheral sub-system that is strategic of nature.

Business Priority

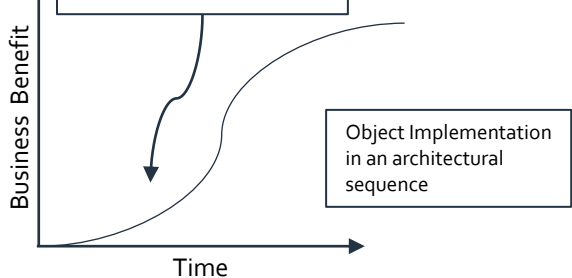

A Solution that delivers immediate result with a huge throw away component

Every sub-component has a quick and immediate business benefit due to its business criteria focus

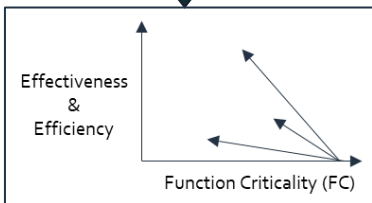

Architectural Priority

All the sub-components have a slow initial value add due to the overall architecture nature

1.) Business Strategic Alignment

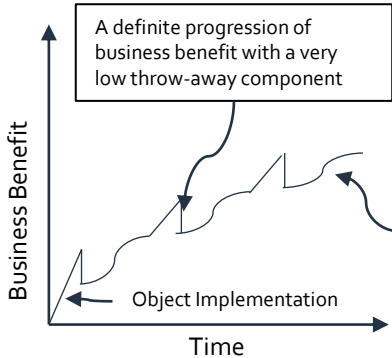

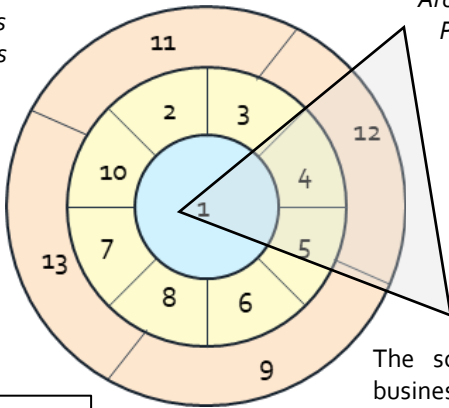

2.) Architectural Priorities

Business Priorities

Architectural Priorities

Every sub-component has an immediate value-add due to its individual architecture nature

The solution is to accommodate the business priorities into the architectural priorities by means of a "pizza slice". The pizza slice shows the portions of each sub-system to be implemented to ensure that architectural priority is fulfilled as well as meeting the needs set by the business priority.
